Allowable Subject Matter

Claims 1-17 are allowed.

Reason for Allowability

The following is an examiner's statement of reasons for allowance: the primary reason for the allowance is the including, in combination with other limitations recited in the claims, the limitations of an electromagnetic sound generator comprising:

a cup-shaped yoke;

a spool on which a coil is wound, the spool having a hole through its central portion and being installed so as to contact the inner surface of the yoke;

a spring having an edge that is secured to the edge of the open end of the yoke;

a core that is constituted by a cylindrical main body part and a plate part that is formed on the lower side of the main body part, the main body part being inserted inside the hole through the spool and being movable up and down inside the hole, the lower surface of the plate part being secured to the central portion of the spring, and the core being movable up and down as a unit with the central portion of the spring; and a back plate that limits displacement in the direction of the lower surface of the core; wherein attractive force causes the core to strike the yoke when current is conducted to the coil, and resilience of the spring causes the core to strike the back plate when current is cut off; thereby producing sound.

Comparing to the prior-art of the record, none of the prior art references of the record, either stand alone or in combination, has taught or suggest the above-mentioned features, particularly *a core that is constituted by a cylindrical main body part and a plate part that is formed on the lower side of the main body part, the main body part being inserted inside the hole through the spool and being movable up and down inside the hole, the lower surface of the plate part being secured to the central portion of the spring, and the core being movable up and down as a unit with the central portion of the spring*, in combination with other limitations recited in the claims.
